

Pre-congress Workshop Hysteroscopy

Objective

- To become familiar with Operative hysteroscopy
- To understand how to use and set up different operative equipment

Description

The workshop will combine lectures, case study discussion and practical stations. The lectures will include pathology type and choice of equipment, troubleshooting with stack, light source and scopes and use of tissue removal systems. There will be rotational practical stations with hands-on removal of intrauterine pathology using simple forceps, morcellation and using electrosurgery.

The practical sessions will use both models and simulators. The stations will include improving camera skills and hand- eye co-ordination in:

1. Operative hysteroscopy
2. Tissue removal devices
3. Resectoscope
4. Endometrial ablation

A particular station will focus on case studies and management of complex cases. The case studies will include videos and hysteroscopic images.

Who should attend?

Trainees who have registered or plan to register for the benign gynaecology surgery: hysteroscopy or benign abdominal surgery: open and laparoscopic.

Consultants with interest in hysteroscopy.

Nurses who have been performing diagnostic hysteroscopy for 12 months and who are ready to progress onto operative procedures and want to understand how to use and complete the nurse operative logbook.

GP's who have an interest in hysteroscopy or develop their skills.

**Tuesday, 29th
April 2025**

Start time: 09:00
End Time: 16:30

**Registration
fee: £250**

**Maximum
delegates: 20**

Address:

**Bridge Community
Church Conferencing
The Cedar and Cypress Room**
Rider Street
Leeds
LS9 7BQ

Course organisers:
