

Pre-congress Workshop

Gynaecological Response to the Acute Surgical Presentation (GRASP)

Objective

This programme is aimed at preparing gynaecological surgeons for the emergency scenarios they may face when in theatre or on-call. By developing a rigid set of algorithms for typical presentations such as acute haemorrhage, or the peri-operatively compromised patient, it will help standardise the management of the acutely unwell patient and reduce the impact of human factors that come into play.

Supported by

ETHICON
Johnson & Johnson SURGICAL TECHNOLOGIES

Who is this aimed for?

This programme is aimed at preparing senior gynaecological trainees and gynaecology consultants for emergency scenarios they may face when in theatre or on-call. By developing a strategy for approaching typical presentations such as acute haemorrhage, or the peri-operatively compromised patient, it will help standardise the management of the acutely unwell patient and reduce the impact of human factors that come into play. There is the potential to develop multi-disciplinary programme to include nursing and theatre staff who regularly practice in gynaecology.

What is the format of the course?

This will be a one-day, face to face, interactive course. It will be run within simulation equipment where real-time scenarios can be simulated within a realistic environment. There will be a combination of lectures, tutorials as well as emergency simulation drills. Each scenario will have an associated algorithm developed for optimal and timely management.

**Tuesday, 29th
April 2025**

Start time: 09:00
End Time: 17:00

**Registration
fee: £200**

**Maximum
delegates: 24**

Address:

Thackray Museum of Medicine
Moynihan Auditorium
Beckett Street
Leeds
LS9 7LN

Course organiser:

> Donna Ghosh
