

Pre-congress Workshop Transvaginal Radiofrequency Ablation for Uterine Fibroids

Objective

Join this immersive workshop on radiofrequency ablation of uterine fibroids using the transvaginal approach, led by international faculty who are global leaders in minimally invasive fibroid treatment.

Designed for gynaecologists, particularly those confident in ultrasound scanning, this session provides the knowledge and practical skills to safely and effectively integrate TVRFA into clinical practice. Participants will explore clinical indications, outcomes, and the latest data, including evidence on fertility and reproductive health.

The programme includes expert guidance on establishing a successful TVRFA service within the UK, followed by a hands-on session using phantoms to develop procedural technique and familiarity with the technology.

Ideal for clinicians looking to expand their treatment portfolio with a uterus-preserving, evidence-based innovation supported by cutting-edge radiofrequency technology and international best practice.
